DETAILED ACTION

Allowable Subject Matter

1. Claims 4-20 are allowed over the Prior Art of record.
2. The following is an examiner's statement of reasons for allowance: The primary reasons for allowance of independent claim 4 is the inclusion of the specific limitations of a system for monitoring the dispensing of a paste from a reservoir in response to the application of pressure on the paste from a piston having all of the recited elements, specifically including an analysis means that detects a rate of displacement of a piston to see if has exceed at least one reference rate for a time greater than a threshold limit. As to independent claim 5, the particular limitation if the rate of displacement has exceeded the reference rate for a time less than a spike time limit. As to independent claim 6, the analysis means comprises a linear variable differential transformer having a core that translates in accordance with the piston. As to independent claim 11, the primary reason for allowance is the inclusion of a position transducer for generating a displacement signal of the piston, and an analysis means measuring a compression signal comprising the difference in the displacement signal when a reference pressure is applied and when the reference pressure is released. None of the Prior Art teach or disclose these specific limitations in a system for monitoring the dispensing of a paste or any other type of fluid.
3. The two closest Prior Art references (employed in the previous Office Action) monitor the displacement rate of a piston, however, fail to disclose or teach the above limitations.
